SEIZURE
ADMINISTRATIVE ORDER

Initiate immediate supportive care:
Protect patient from injury
O2 to maintain sat ≥ 94%
Complete primary and secondary survey as indicated
Vital Signs (FSBG and temperature as indicated)
Cardiac Monitor

Use this Administrative Order on the following patients:
- Seizure activity
- Postictal mental status

Do not use this Administrative Order on the following patients:
- Pregnant > 20 weeks gestation and no history of seizures **(Follow OB AO)**

Actively Seizing

NO
If patient is NOT actively seizing, continue with supportive care

Yes
If patient actively seizing administer
Midazolam (Versed) IM first

- ***Midazolam (Versed) 0.2mg/kg*** (max 10 mg) IM
- If IV already established administer ***Midazolam (Versed) 0.1mg/kg*** (max 5 mg)

- **Initiate IV *NS/LR* TKO**
  - If normotensive, consider saline lock with NS flush
  Push all meds slowly

- If seizure continues for 10 minutes:
  - No IV access: repeat ***Midazolam (Versed) 0.2mg/kg*** (max 10 mg) IM
  - If IV access: administer ***Midazolam (Versed) 0.1mg/kg*** (max 5 mg)

- Monitor Airway and breathing

Special Considerations:
If patient is <6 years old, consider febrile seizure and provide cooling techniques

Notification to include:
Seizure Administrative Order, unit number, patient age, gender, and ETA to receiving facility.
Advise if patient is unstable.
